

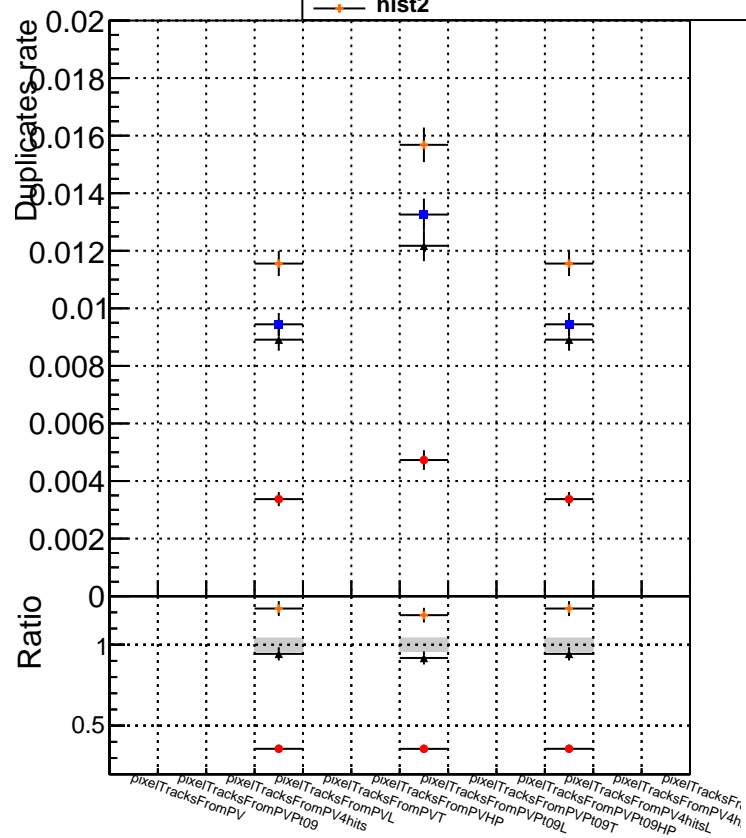

Figure 10 displays the Fake rate (top panel) and Ratio (bottom panel) for various track selection criteria. The top panel shows the Fake rate on a logarithmic scale from 0.005 to 0.05. The bottom panel shows the Ratio on a linear scale from 0.5 to 1.0. The x-axis lists 12 track selection criteria. Data points are shown for four different track selection methods: PixelTracksFromPV (black), PixelTracksFromPV4hits (red), PixelTracksFromPVT (blue), and PixelTracksFromPV4hitsL (green). The Fake rate generally increases with the number of hits, while the Ratio remains close to 1.0.
